Encl: updates on line of business and development strategy.

Company has decided to develop the line of business in the area of oxo-biodegradable stretch film. The key highlight for the same is as follows:

WHAT IS OXO-BIODEGRADABLE STRETCH FILM?

Oxo degradable plastic films include an additive designed to greatly accelerate their ability to breakdown and degrade regardless of the disposal method or circumstances. An oxo-biodegradable film breaks down fastest in direct sunlight and oxygen but even in a landfill situation, it will typically degrade in less than half the time of traditional stretch films. Most will agree the best disposal method is recycling and the oxo additive does not adversely affect that preferred option.

It is the first eco friendly formulation which tested for pallet wrapping that still has the necessary elongation, memory and puncture resistance to make it an economical and viable alternative to standard stretch films.

ECO-WRAP OXO-BIODEGRADABLE STRETCH FILM

Eco-wrap oxo-biodegradable stretch films are eco obvious.

All of the oxo degradable films we offer are tinted green so others recognize them as a different and eco friendly film. It encourage customers to add their own placards on each load being wrapped so their environmental commitment is noticed and hopefully their example followed.

In a commitment towards creating a greener and better world, Company will developed environmental friendly products "Eco-Wrap" which are designed for landfill, compost and soil disposal.

All our plastic bags, films and sheets can be made 100% degradable with the addition of totally degradable plastic additives.

These products will ultimately degrade in a landfill environment. Once the process is complete, only carbon dioxide, water and biomass will remain, leaving non-toxic by-products.

BENEFITS OF ECO – WRAP OXO – BIODEGRADABLES STRETCH FILM

- 100% degradable and recyclable
- Complies with US, UK and EU food regulations (FDA and SCF)
- Harmless and non-toxic
- Superior mechanical properties for optimum performance
- Does not alter the physical performance and characteristics of the product
